

Empirical complexity — Instructions vs N (log-log, serial t1)

Instructions

10^7

10^6

10^2

10^3

N (input size)

- bitonicsort ($k \approx 0.24$)
- bottomupsort ($k \approx 0.11$)
- combsort ($k \approx 0.13$)
- countingsort ($k \approx 0.01$)
- heapsort ($k \approx 0.11$)
- insertionsort ($k \approx 0.10$)
- mergesort ($k \approx 0.11$)
- oddevensort ($k \approx 0.24$)
- quicksort ($k \approx 0.08$)
- radixsort ($k \approx 0.06$)
- shellsort ($k \approx 0.10$)
- smoothsort ($k \approx 0.15$)
